Standard Deviation

## What is a random variable?

- Random variable; a quantity that can be thought of as dependent on chance phenomena.
- $X=$ the value of a coin toss (heads or tails).
- $Z=$ the amount of torque required to loosen the next bolt.
- $T=$ the time you'll have to wait for the next bus home.

What is a random variable?

Probability
Probability Mass
Functions (pmf)
Cumulative
Distribution
Functions (cdf)

- $N=$ the number of defective widgets in manufacturing process in a day.
- $S=$ the number of provoked shark attacks off the coast of Florida next year.
- Two types:
- Discrete random variable: one that can only take on a set of isolated points ( $X, N$, and $S$ ).
- Continuous random variable: one that can fall in an interval of real numbers ( $T$ and $Z$ ).

## Discrete random variables

- A discrete random variable has a list of possible values:
- $X=$ roll of a 6 -sided fair die $=1,2,3,4,5$, or 6 .
- $Y=$ roll of a 6 -sided unfair die $=1,2,3,4,5$, or 6 .
- But how do you distinguish between $X$ and $Y$ ?

Expected Value

Variance and Standard Deviation

## Probability

- $P(X=x)$, the probability that $X$ equals $x$, is the fraction of times that $X$ will land on $x$

1. We expect a fair die to land the number 3 roughly one out of every 6 tosses. Thus, $P(X=3)=1 / 6$
2. Suppose the unfair die is weighted so that the number 3 only lands one out of every 22 tosses. Then, $P(Y=3)=1 / 22$.

- $X$ has the following probabilities:

What is a random

## What is a random variable?

## Probability

Probability Mass Functions (pmf)

Cumulative Distribution Functions (cdf)
Standard Deviation

## Probability mass functions (pmf)

Discrete Random Variables (Ch. 5.1)

- The probability mass function (pmf) $f(x)$ of a random variable $X$ is just $P(X=x)$
- $X$ has $f(x)=1 / 6$
- $S$ has $f(s)=\frac{1}{2^{s}} \frac{6}{\pi^{2}}$.
- We could also write $f_{X}$ for the pmf of $X$ and $f_{S}$ for the pmf of $S$.

Probability
Probability Mass
Functions (pmf)
Cumulative
Distribution
Functions (cdf)
Expected Value
Variance and

- Rules of the pmf $f$ :
- $f(x) \geq 0$ for all $x$.
- $\sum_{x} f(x)=1$.

## Your turn: calculating probabilities

- Let $Z=$ the torque, rounded to the nearest integer, required to loosen the next bolt on an apparatus.

| $z$ | 11 | 12 | 13 | 14 | 15 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $f(z)=P(Z=z)$ | 0.03 | 0.03 | 0.03 | 0.06 | 0.26 |
| $z$ | 16 | 17 | 18 | 19 | 20 |
| $f(z)=P(Z=z)$ | 0.09 | 0.12 | 0.20 | 0.15 | 0.03 |

## What is a random variable?

variable?
Probability

## Probability

## Probability Mass Functions (pmf)

Cumulative Distribution Functions (cdf)

Expected Value

Variance and Standard Deviation

## The cumulative distribution function (cdf)

- Cumulative distribution function (cdf): a function, $F$, defined by:

$$
\begin{aligned}
F(x) & =P(X \leq x) \\
& =\sum_{z \leq x} f(z)
\end{aligned}
$$

What is a random variable?

Probability
Probability Mass
Functions (pmf)
Cumulative
Distribution
Functions (cdf)
Expected Value
Variance and
Standard Deviation

- $F$ has the following properties:
- $F(x) \geq 0$ for all real numbers $x$.
- $F$ is monotonically increasing.
- $\lim _{x \rightarrow-\infty} F(x)=0$
- $\lim _{x \rightarrow \infty} F(x)=1$
- When statisticians say "distribution", they mean cdf.

## Example: torque random variable, $Z$

| $z$, Torque | $f(z)=P[Z=z]$ | $F(z)=P[Z \leq z]$ |
| :---: | :---: | :---: |
| 11 | .03 | .03 |
| 12 | .03 | .06 |
| 13 | .03 | .09 |
| 14 | .06 | .15 |
| 15 | .26 | .41 |
| 16 | .09 | .50 |
| 17 | .12 | .62 |
| 18 | .20 | .82 |
| 19 | .15 | .97 |
| 20 | .03 | 1.00 |

## What is a random variable?

variable?
Probability
Probability Mass
Functions (pmf)
Cumulative
Distribution
Probability Mass Functions (pmf)
Functions (cdf)
Expected Value
Variance and
Standard Deviation

## Expected Value

## Variance and Standard Deviation

## Expected Value

- The expected value $E(X)$ (also called $\mu$ ) of a random variable $X$ is given by:

$$
\sum_{x} x \cdot f(x)
$$

Discrete Random Variables (Ch. 5.1)

- When $X$ is the roll of a fair die,

$$
\begin{aligned}
E(X) & =1 f(1)+2 f(2)+3 f(3)+4 f(4)+5 f(5)+6 f(6) \\
& =1(1 / 6)+2(1 / 6)+3(1 / 6)+4(1 / 6)+5(1 / 6)+6(1 / 6) \\
& =\frac{1+2+3+4+5+6}{6} \\
& =3.5
\end{aligned}
$$

- $E(X)$ is a weighted average of the possible values of $X$, weighted by their probabilities.
- $E(X)$ is the mean of the distribution of $X$

Your turn: expected value

| $y$ | 1 | 2 | 3 | 4 | 5 | 6 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $P(Y=y)$ | $5 / 22$ | $7 / 44$ | $1 / 22$ | $7 / 44$ | $2 / 11$ | $5 / 22$ |

Will Landau

What is a random variable?

Probability
Probability Mass
Functions (pmf)
Cumulative
Distribution
Functions (cdf)
Expected Value
Variance and
Standard Deviation

- Calculate $E(Y)$, the expected value of a toss of the unfair die.

## Answer: expected value

Discrete Random Variables (Ch. 5.1)

Will Landau

$$
\begin{aligned}
E(Y)= & 1(5 / 22)+2(7 / 44)+3(1 / 22) \\
& +4(7 / 44)+5(2 / 11)+6(5 / 22) \\
= & 3.5909
\end{aligned}
$$

What is a random
variable?
Probability
Probability Mass

Functions (pmf)
Cumulative

- The average roll of the unfair die is 3.5909 .

Distribution
Functions (cdf)

- $E(Y)$ is the mean of the distribution of $Y$.

Expected Value
Variance and
Standard Deviation

## Your turn: expected value

Discrete Random Variables (Ch. 5.1)

| $z$ | 11 | 12 | 13 | 14 | 15 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $f(z)=P(Z=z)$ | 0.03 | 0.03 | 0.03 | 0.06 | 0.26 |
| $z$ | 16 | 17 | 18 | 19 | 20 |
| $f(z)=P(Z=z)$ | 0.09 | 0.12 | 0.20 | 0.15 | 0.03 |

Probability Mass
Functions (pmf)
Cumulative
Distribution
Functions (cdf)
Expected Value
Variance and
Standard Deviation

- Calculate $E(Z)$, the expected value of the torque required to loosen the next bolt.

## Answer: expected value

Discrete Random Variables (Ch. 5.1) Will Landau

What is a random variable?

Probability
Probability Mass
Functions (pmf)

$$
\begin{aligned}
E(Z) & =11(0.03)+12(0.03)+13(0.03)+14(0.06)+15(0.26) \\
& =16(0.09)+17(0.12)+18(0.20)+19(0.15)+20(0.03) \\
& =16.35
\end{aligned}
$$

Cumulative
Distribution
Functions (cdf)
Expected Value
Variance and
Standard Deviation

- The average torque required to loosen the next bolt is 16.35 units.

## What is a random variable?

variable?
Probability
Probability Mass
Functions (pmf)
Cumulative
Distribution
Functions (cdf)
Expected Value
Variance and
Standard Deviation

Expected Value

Variance and Standard Deviation

## Variance

- Variance: the variance $\operatorname{Var}(X)$ (also called $\sigma^{2}$ ) of a random variable $X$ is given by:

$$
\operatorname{Var}(X)=\sum_{x}(x-E(X))^{2} f(x)
$$

Discrete Random Variables (Ch. 5.1)

## Will Landau

What is a random variable?

Probability
Probability Mass
Functions (pmf)
Cumulative
Distribution
Functions (cdf)

- Shortcut formulas:

$$
\begin{aligned}
\operatorname{Var}(X) & =\left[\sum_{x} x^{2} f(x)\right]-(E(X))^{2} \\
& =E\left(X^{2}\right)-E^{2}(X)
\end{aligned}
$$

- The variance is the average squared deviation of random variable from its mean.
- Standard deviation: $S D(X)=\sigma=\sqrt{\operatorname{Var}(X)}$

## Example: calculating the variance

| $q$ | 1 | 2 | 3 | 7 |
| :---: | :---: | :---: | :---: | :---: |
| $f(q)$ | 0.34 | 0.1 | 0.22 | 0.34 |

- Long way:

$$
\begin{aligned}
E(Q)= & 1(0.34)+2(0.1)+3(0.22)+7(0.34) \\
= & 3.58 \\
\operatorname{Var}(Q)= & (1-3.58)^{2} 0.34+(2-3.58)^{2} 0.1 \\
& \quad+(3-3.58)^{2} 0.22+(7-3.58)^{2} 0.34 \\
= & 6.56
\end{aligned}
$$

## Probability

Probability Mass
Functions (pmf)
Cumulative
Distribution
Functions (cdf)
Expected Value
Variance and

- Short way:

$$
\begin{aligned}
E\left(Q^{2}\right) & =\sum_{q} q^{2} f(q) \\
& =1(0.34)+4(0.1)+9(0.22)+49(0.34) \\
& =19.38 \\
\operatorname{Var}(Q) & =E\left(Q^{2}\right)-E^{2}(Q) \\
& =19.38-3.58^{2} \\
& =6.56
\end{aligned}
$$

## Your turn: calculating the variance
